

Gerontorheumatology: A Comprehensive Guide to Musculoskeletal Aging

As we age, our bodies change in many ways. Our muscles and bones become weaker, our joints become stiffer, and our immune system becomes less effective. These changes can lead to a variety of musculoskeletal problems, including arthritis, osteoporosis, and sarcopenia.

Gerontorheumatology is a new field of medicine that focuses on the diagnosis and treatment of musculoskeletal problems in older adults. Gerontorheumatologists have a deep understanding of the aging process and how it affects the musculoskeletal system. They are also trained in the latest techniques for diagnosing and treating rheumatic diseases in older adults.
