Translation is the process of transferring a written or spoken text from one language to another. In this comprehensive to the field of translation, Paul Smith provides a clear and concise overview of the history, methods, and applications of translation. He begins by discussing the earliest forms of translation, which were carried out by scribes in ancient Egypt and Mesopotamia. He then traces the development of translation through the Middle Ages and

Renaissance, and examines the role that translation has played in the spread of ideas and cultures.

Smith goes on to discuss the different methods of translation that are used today, including literal translation, dynamic equivalence, and communicative translation. He also provides a detailed overview of the various applications of translation, such as literary translation, technical translation, and legal translation.
